

Impacted Soil Excavation, Treatment & Offsite Disposal

Description of Work

Project Name

Carol & Dubbies Superfund Site,
(Closure of 8 Surface Impoundments)

Location

Port Jervis, New York

Services and Responsibility

AST performed treatment of contaminated water from eight surface impoundments, solidification of over 12,000 cubic yards of sludge, and the excavation and loading of 24,000 cubic yards of contaminated soil. Constructed two 50 feet by 80 feet HDPE (60-mil) double lined temporary hazardous waste storage areas. Two of eight ponds contained organic levels that required performing all associated work in Level B. The entire site of the former eight impoundments was then backfilled, graded, and reseeded.

Contractor

AST Environmental, Inc.
